Hi @Raziel

Actually it's i.69 from previous thread & #46 :

@All

It turned out that I jinxed it by saying I was going to have it ready last week. I discovered a bug, but I haven't been able to fix it yet. However, even with the bug, the latest version is still rather stable (more so than older versions). I will therefore try to upload an intermediate version as soon as possible for people to try. I will appreciate all feedback for this version, so that when I kill the big bug, I also will have removed all the eventual small pesky ones . Ill post updates in this forum

4) I tried to change the color of the bleach white background and can't. White is too noisy and hurts my eyes.
