I tried to do the basic saving stuff with the Amigans radio before it was in the air. I am rather sure i tested every possibility. I created nearly 10 different saving lists in the way you suggested. (clearing or not the existing list: the empty list thesn saves perfectly, but the added Amigans radio did not appear) Not clearing the list i could save this list too any times as a different file, but the added Amigans radio visible on the playlist did not appear in the saved playlist. I checked this as well viewing the playlist with multiview, as reloading the saved playlist in Tunenet.

Only thing i could do is edit the list manually (coming to think of it now)

I also just found out that adding the Amigans URL and closing Tunenet saved the line OK.

Since i did that the behavior is quite different and more as expected. I don't know what changed.

Still a suggestion:

I would expect to be able in 'edit' mode to add an URL
