Actually, I still have this weird bug : when iconified for a long time playing music, i cannot deiconify TuneNet with a double click on its Applcon.

What's more, double clicking on the Applcon makes the whole system freeze (but the music still goes on) and a reboot is required

I've experienced this on my AmigaOne G4/1Ghz and a Sam440ep.

Now I don't iconify anymore TuneNet and get no problem at all listening streaming radios for hours.

Nonetheless, TuneNet is excellent and I could not live without it 😊
