Well the reason is that once Timberwolf comes out, we would want the latest version of it. Updating the source code now to 3.6 and later to 4.0 is a waste of time, so we opted to go for 4.0 directly as the better alternative.

Makes good sense given time needed, look forward to it.

Random, but had an encounter with live Timberwolves the other day at the safari park, didn't realise it was an actual species 😊
