What have they done to my Home Page?

...what have they done to my page?

It always was a sad song. Anyway, the local news site has changed their index page since Tuesday and now OWB can't load it any more. This index page (<http://www.abc.net.au/news>) has been my home page for years, even back in the IBrowse days.

But not any more. OWB just goes into a loop trying to load it. I've noticed that Firefox (on a PC) seems to take a long time loading the page, so something funny has happened.

Can anyone load it with OWB? How does it go with MorphOS' OWB?
