I tried with OWB 3.31 and OWB 3.32. Sometimes I get some stuff in the window, other times I get nothing. Always stalls at about the 504 KB mark.

Also having intermittant trouble accessing amigans.net and some other sites so may be trouble with our ADSL line or ISP.

Update... For me, <http://www.abc.net.au/news> seems to load ok using AWeb APL Lite, IBrowse 2.4, NetSurf 3.0 Development version, and TimberWolf public apha. Probably looks a bit different than you would expect when viewed with some of these browsers. OWB 3.31 is still no dice.
