Haha, yes I would kill to have Wipeout2097 on my Sam

Wipeout 2097 already works on the SAM!

Please can you remove the links to the Napalm executable and source (or I will do it for you 😊), it is still a commercial product so the modified executable should not be distributed (even if it doesn't work without all the data files!). You can use something like [gpatch](#) to distribute a patch file which can be applied.
