Definitively a mix of hi-res (E-UAE running at 640x480) + alpha sound drivers (no DMA) is causing the audio problems in Lotus 2.

On my Sam Flex running at 800Mhz + native screen mode (picasso96 320x256@150Hz) the music during the intro and loading sequence play just as good as on my A2000 sitting right below it.

I'm sure that when the final DMA drivers will be ready (and when used with a native mode) also R-Type 2 should be fine on the 460EX.
