however the Intuition menu structure doesn't preclude having more levels, so a suitable update to Intuition to make them display should resolve this one

There are several restrictions which prevent multiple levels. I posted about it once here (in reply to you I think). Mainly the way menu events are encoded, but IIRC that scheme is also used by a member of a particular data structure. So it is not as easy as it appears :(

EDIT: [Found it](#), so you can see what I thought the problems would be.
