I would have quoted your comment about crashing but pasting text still doesn't work. TW crashed the first time I started it because I wasn't online for it to find the start page. It has worked since then and I was able to copy my bookmarks from the previous install. I was so excited I didn't save the GR report either 😊

After I grab the scrollbar to move down the page the scrollbar then follows the mouse pointer whenever I move it. That's very annoying; Does anyone know a way to stop that behavior?
