Posting this from TW beta 3 on my Sam 440ep@600MHz.

It's still not exactly fast but then as I said - it's on my Sam440ep, so I wouldn't expect it to be! Works very well though so far.

BTW, I didn't see anything in the readme in the archive about opening it on a custom screen. Tried adding a screen called "Timberwolf" but that didn't do anything. Am I missing something obvious?

Keep up the excellent work!
