Pasting from Workbench

All of a sudden, I cannot paste into Sylpheed with RA^V from Workbench. For a year or so I have been writing messages in NotePad and transferring them to one of my UseNet groups with a regular Amiga-style copy and paste. Now nothing happens. What could have changed?

Most of the time I did it on my A1. Now it's a SAM460. But I'm sure I've done some successful pasting in the month-and-a-half I've used the SAM exclusively.

Come to think of it, I can't paste into Timberwolf either. I wonder if that's related?
