URL:

Hre trying to visit an URL (www.amigans.net) and it stays in a loop forever!!!
Seems doesn't translate/get the DNS/URL/or_whatsoever_is_called properly here.
I can't broser the internet with TWbeta4 (using AOS4.1upd4).
The same URL with MUIlowb works fine.

Will check it further

EDIT: now works, seems one of the prefs/OPTIONS I chnage make some weird effect on browsing the web.
Stay tuned 😊
