Hi there,

great new version, it s faster, more stable and simply awesome 😊

I have one little problem regarding bookmarks and wanted to ask here before i open a bugreport

I cannot save them...

They are simply not saved when i click on the yellow star, nothing happens.

Someone suggested to delete places.sqlite and start over but it doesn t work either...

What i have is places.sqlite, places.sqlite-journal and places.sqlite.corrupt...maybe there is the culprit?

Why does it create a .corrupt file on the very first bookmark i try to save?

I have RANDOM started with the tootype ACTIVATE=1 in devs/dosdrivers

Timberwolf is on a JXFS partition

Please help, it s driving me mad
