Is it possible to get hold of the Spidermonkey includes you used, so I can use/link to libmozjs.so?

Sorry I overlooked this post... What kind of includes do you need? I don't think there had been any changes in those, but I'll look it up. Drop me an e-mail to remind me, or I'll likely forget :)

Done, thanks. The includes are all of them, some are generated by configure or by the makefile (and by other compiled files I think).
