If you are having trouble, please make sure to delete the old installation, including the user profile, and retry. An old database that is not correctly initialized may interfere, especially if the back button doesn't work.

Note that there is no way this update can be more unstable than the last one. The last beta had much more fundamental changes.

ok removed the user profile & reinstalled but still getting hangups every so often, tried rebooting but still same here.

Good to see my 2 favourite add-ons on my pc notebook working so far on this release: Download Stausbar 0.9.10 and Screenshoter 1.01 😊
