Been using it for two days now and its a lot better than before, its a lot faster and more stable on my 460. Not having any of the problems some have been having, even imported my bookmarks from my windows firefox installation no problem.

Strange, doesn't seem much faster at all here! More stable but unable to get copy and paste to work correctly, tied R-Amiga C and CTRL C combinations as well as menus, just doesn't work for me but last version did!

Quote:

Very happy with this version and looking forward to the final release.

Its getting harder to choose between MUIOWB and Timberwolf now although MUIOWB may just have the edge due to its speed.

It's getting better but a long way from being my default browser, shall continue using MUIOWB as much faster and cut n paste works well too. Hopefully later releases will have speed improvements and minor fixes 😊
