URL:

... as posted by Salass00 in the "Let's Make Tunenet Plugins" thread:

Quote:

I think most of the major bugs should be fixed now. I've put up a "beta" version that you can test:

[http://dl.dropbox.com/u/26599983/uade\\_tnplug-beta.7z](http://dl.dropbox.com/u/26599983/uade_tnplug-beta.7z) (just extract the entire archive into

TuneNet/Plugins/) If it works correctly I will make a proper release of it. Note that to use the plugin you will

need to have a working UADE installation: <http://os4depot.net/index.php?function=audio/play/uade.tar.bz2> ...

e=audio/play/uade.tar.bz2

Please help us get some feedback!

This plugin plays just about any music format ever created for the amiga, including MED etc. And the playback is close to perfect!
