I've replied, however I would have preferred it on this thread (or by email). It's easier for me to reply to and keeps it all together, also it might be useful for others to read.

At the moment I'm getting that I need to add notification support, at least so it notifies on locally-changed files (not sure I can monitor the remote location - maybe on a slow schedule it might be doable)

If it is ok for you, you can paste QA here. Nothing personal really.

Local notification would be nice :)

Remote location would be nice allso, but speed of connection itself is pretty slow.

When I drop multiple little files to webdav device, it works. Albeit slow. I make bit more testing to see, if I get bit better picture for myself, why.
