Mmm bounty text should atleast include the latest version not an old and no more supported 1.16/1.17 release, also it's not so 100% clear what would be included into the port and what's not !

For example latest release of Odyssey are now using some MorphOS specific like the spellchecker.library for spelling corrections, the new calltips.mcc MUI class for form filling and so on ..

That one would be ported aswell ?

And also what about HTML5 video support ?

1000 Euros for Fab is ok, he deserve for sure but without any video support the port will still incomplete and not fun at all ...
