On board M9

>What applications and OS are you emulating when it crashed?

Applications: none

Just booting an old hardfile (7.1?) from shapeshifter. The same settings works fine in full-screen mode but just freeze in window & window-compositing modes

>What did you do when it crashed?

It only crash in window-compositing mode when moving a window

>If your using a old update...

I know I know but this Sam440 is not online and serve only for compiling/testing my own programs
