@sofistissoftware

yes composition on euae for sure will speed up the operation and in junction with the jit we will have a super great result ... im sure about this

this is my recent test about euae sdl on os4.1.6.60 on pegasos2

<http://www.youtube.com/watch?v=pLedJuSKLOI>

compare my result of video with this ;)

[http://www.retrocomputing.net/parts/c ... 600/a600de/howupgrade.htm](http://www.retrocomputing.net/parts/c...600/a600de/howupgrade.htm)

and imagine an Euae Jit+Composition+GI what it can do :P

There is a new Wip version of euae with many improvements i hope will exit a new sdl version with libboostygfx from hunoPPC because will make euae render in Opengl and Overlayscreens and a compositing version too.

and if will be a Altivec compiled version better more and more :P :P :P : P
