Quote:

```
[JAmiga ENV variables]
CLASSPATH CURRDIR:jAmiga;
```

The CLASSPATH is strange; there a comma missing between the assigns, and the JAmiga assign should't need to be there.

Please do this:

```
delete ENV:CLASSPATH
delete ENVARC:CLASSPATH
```

```
setenv SAVE CLASSPATH CURRDIR;
```

The JAmiga:JAmiga should then hopefully say "JAmiga has been successfully installed!" in the end

You can see current snapshot of what JAmiga:JAmiga should say here:

<https://code.google.com/p/jamiga2/wiki/CurrentVersion> (your's do however look mostly correct.)

*If it still doesn't work*, could you please verify that you have a file named **VMClassLoaderData.class** in JAmiga:jvm/share/jamvm/classes/**jamvm/java/lang/**.

That's basically what this says you don't have:

Quote:

```
Exception occurred while VM initialising.
java/lang/NoClassDefFoundError: jamvm/java/lang/VMClassLoaderData
```
