Well that's not very true Andy, MUI MPlayer (AltiVec version) doesn't crash on non AltiVec machines, another example is DvPlayer ..

Andy is correct, altivec code won't run on non-altivec machines.

Programs with altivec code that also run on non-altivec machines are written carefully such that the altivec code never runs on non-altivec machines. This requires separating out all code that is altivec, and putting them into separate source files. That way, only those files are compiled with altivec enabled.
