Hey kase1e, sorry if this has been answered before, but when I start Odessy, it says "please insert volume RANDOM:" in any drive, then it makes me assign it to something...why is that?

Also, downloads don't work at all on my system (X1000 with Update 6). When I go to download something from Odessy the download window pops up but nothing actually downloads!?

Thanks for your work on the browser :) Much appreciated!
