@LiveForIt

My AmigaOne XE sports a G4 at 1,26 Ghz with 1GB Ram, the X1000 has a PA6T at 1,8Ghz and 2GB Ram. No hardware issue there, the debate is elsewhere actually (see below).

@BroadBlues

I know they are advertising their product (the X1000) and that was exactly my point since I'm pretty sure that A-Eon (or whoever produces software) cannot rely only on the X1000 userbase to have a larger audience.

Well, we'll see what this package will bring with it 😊
