Therefore, it works only for me and Alfskill...

Alfskill, do you think that it could be because you sent me an updated LibQtCore.so at the beginning of 2014 to solve some process manager problem (if I remember well) ? (libQtCore 5401140 bytes 01/01/14 22h03)

@all

Thank you for the tests,

With the following debug version, could you make 2 tests

1) start SMTube from Workbench

When started from Workbench by double-click or "WBRun SMTube", you should have in a debug console

"SMTube started from Workbench with 0 argument."

and the 3 tabs availables

2) start it from CLI

When started from CLI, you should have in the Shell

"SMTube started from CLI with 1 arguments. First arg is appdir:smtube" (appdir:smtube or something else)

and only 1 tab available

http://zzd10h.amiga-ng.org/Qt/SMTube/SMTube_debug.lha

If you want the previous working version, it's here :

http://zzd10h.amiga-ng.org/Qt/SMTube/SMTube_svn6191.lha

@Samir

Right, I don't know why but it fails when trying to open (for me too)

```
QMessageBox::warning(this, tr("Error"), error);
```

In the debug version above, I replaced it by a simple print to the console.
Could you test it, please ?
