@Samir :

Not related to libQtCore because for me too, on my setup, it fails.

I find what was failing, it's because the error string is too small.

If I replace

```
QMessageBox::warning(this, tr("Error"), error);
```

by

```
QMessageBox::warning(this, tr("Error"),error + " " );
```

it works (notices the more than 50 space character after "error + "

If I replace "error" by a constant string, it's the same, this QMessageBox want a string that is at least more than xx characters (too lazy to count)

I'm not a programmer, therefore don't be surprised by the following explanation...

"I don't understand why it doesn't work here because QMessageBox works very well on CutePiano (OS4 Qt too)

```
QMessageBox::information( this, tr("About CutePiano"), tr("Simple piano keyboard build with Qt."));
```

```
"
```

Shortly, this new version should work,

http://zzd10h.amiga-ng.org/Qt/SMTube/SMTube_debug.lha

I will not release this dirty "fix". But as, except you, TommySammy and Pseudaxos (on AmigaNG) reply to my "ask for test" request, it will not be a loss for os4 community if i stop smtube port.

See on smplayer forum, it's easy job (really, without joking thanks to alfkill work)
