Does your playvideo.rexx works on MorphOS too?

I am interested to see anime videos hosted on these sites:

<http://www.popcorn.tv>

<http://www.daisuki.net>

The sites host videos in Flash, and any video has been preceded by one or two advertising in flash too before the chosen video will be played.

So there is a problem viewing it with OWB, even if spoofed as iPad.

When spoofed as Ipad then it appears playing commands interface, but videos not playing.

Is your mPlayer based Arexx script capable to play these videos (it will be great) or perhaps capable (at least) to recognize the \*real\* link to which the videos belong?

(in order to download them and transform them with mencoder and watch it in a more suitable codec for our platforms)
