Then update and delete the new PlayVideo.rexx and replace it with PlayVideo.rexx.good. (renamed to PlayVideo.rexx).

@zzd10h Quote:

Or you can simply change the name of the REXX in SMTube player parameters.

That's not a good idea IMHO, because it means that when a new version of SMTube updates PlayVideo.rexx (to fix bugs or just so it works with new SMTube), then people will still be using the old (buggy/no-longer-working) PlayVideo.rexx code.

Quote:

PlayVideo.rexx is not replaced by AmiUpdate, but right, when i will have more time, I will look for a SMTube.cfg in ENVARC:

Can I suggest just storing it in the SMTube/Amiga folder (next to the ARexx script)? That's MUCH easier for users to edit, unless you are going to add a GUI for updating those settings.
