I just talked to a MorphOS User about my router problem and (as he has nearly the same setup as me) he is still able to access his router (with the same firmware) but he's using Odyssey 1.24//MorphOS.

He also tried it with Sputnik and gets the same error message.

You may ask him to try 1.23 morphos version.

If it will not works on 1.23, but work on 1.24 => webkit problem. If it will works on 1.23 on mos, then or porting-to-aos4-problem, or something with settings.

Just now got the reply from him and he's also not able to log in (getting the error screen) with MorphOS OWB 1.23.

So it's definitely an update to the code i need.

Anything new regarding a possible 1.24/1.25 update for AmigaOS4?

Thank you
