I thinking about making 1.24 port as well ... but there (in 1.23) so many aos4 specific changes already, that making same for 1.24 ... pretty time consuming.

I don't know the code, but I wonder if it is possible to rewrite the 1.23 changes for OS4, such that they are mostly (new includes containing) #defines that modify procedure calls (to be OS4 friendly)? Then it would be easier to reuse such changes for 1.24/1.25.
