Alternatively, is there a keyboard qualifier that disables grab-scrolling?

No, I don't think so.

Would it be possible to add it? (Or otherwise an optional GUI button to toggle grab-scrolling, like Firefox's Grab'N'Drag add-on provides?)

ALSO, is there possibility to add a menu option (or window gadget) to Iconise NetSurf? Such a feature would be quite handy. (I see there is an option for NetSurf to stay in memory when you quit it, but this seems a bit of a strange option - I'd rather have manual control (and a visible indication) of whether it's still running/loaded or not).
