You're not supposed to link the files to your library. They will do nothing for you there.

Instead you compile them into a static library:

```
gcc -O2 -Wall -c -o autoinit_sample_base.o
```

```
gcc -O2 -Wall -c -o autoinit_sample_main.o
```

```
ar -crv -o libsample_auto.a autoinit_sample_base.o autoinit_sample_main.o
```

If you copy this file to SDK:locale/newlib/lib you can then link it to your program with "-lsample\_auto".
