Vpdf needs a more recent MUI Build (MUI5, r5633).

Yes, as there was fixes in mui which make vpdf works as need it. I added check on mui as that is minimum which is necessary for make vpdf works as intendent.

Quote:

And average users do not have it.

If you release it, many users will complain about that (and I have the latest stable release release installed) since without it, a requester pops up.

And what is solution are then ? Don't release it ?:) Or remove requester popup so it will works buggy, and users will scream that aos4 port works bad ?:)

There always will be those ones who do not want to update anything. If you have an idea how to deal with it better, feel free to suggest of course.
