1. Is your crash reproducible with beta7 ?

Apparently no more, i still retried a couple of time and i wasn't able to reproduce it again .. probably it was solved in beta 7 ?

Still to say that i have too little time to do heavy test ..

Quote:

2. If your crash reproducible with beta7, is it reproducible when you have missing "n" only, or in any case ? (remember: ! do tests after hard reboots !)

No i don't think they are related at all, they seems to be 2 different issues (if there are any)

Quote:

3. What your mui version on which you did your tests.

The latest of both ...

I have the latest version of VPDF and latest nightly of MUI5 --> 21.40 svn r5722

Quote:

Also, something wrong with your mui still. You seems didn't update it sinse few days. There, when i choice in ListTree "normal", i have in right "+" image, and in down "-" image. I also for test purposes setuped DejaVu Sand/18 too.

Mmm right, but i also have the latest nightly but setting "Normal" doesn't show any image here, see:

<https://s28.postimg.org/enr1viixp/mui5.png>

As a side note in your grab i saw that you set "6" as a space while instead i had "5" .. so i played a little with that setting and i discovered that i can see the whole text just by set "2" as a space ... all the other values will hide the last letter in treeview, strange ...

Definitively it looks like a problem of space rather than a bug, however considering that we both set the same bigger font i really can't understand why we have a different visualization result ...

Just a thought, as a final test try to test it in Italian language
