It still get a crash when saving myx11setup this time pointing to lxpanel

But you don't get crashes with 'xdummy' anymore?

And when you launch the AmiCynix desktop with "Start_AmiCynix.bat" from Workbench? (located in the main directory of the AmiCynix installation)

Quote:

Whn i launch myx11setup i observed the recurring line

```
00512 : myx11setup : FAIL = [exec] FindPort("XGeekPort.0") [22uS]
```

I guess it has nothing to do with the crash, but still...

This is because myX11Setup tests, if the AmiCynix display 0 is running. It should only happen once and is normal.
