Edit: TIMBERWOLF?!? Where?!?!? I've only ever been able to get the copy for download that is on the official website from 2012 or so, and it has never worked for me.

Nor has it for most of us.

The 2012 version is the only one available, it's an unfinished mess with unoptimized parts that slow it down and debug stuff all over the place.

Some people claim to be working with it, i found that it just was too slow and too buggy to be of any use.

Since i have Odyssey configured to my liking, i never have to use this excuse for a browser ever again again

P.S: I refrain from using Firefox on any of my machines...i use Opera on Win/Linux/Smartphone
