I tried it yesterday for the very first time for about 30 minutes and my first impressions are very positive!

It has what a user need for a good workbench experience, it allow you to have all your devices in one place, add favorites drawers, ftp servers and it is fully customizable! It reminds me the philosophy of Dopus Magellan and the usability of Dopus 4. From Workbench Explorer you can run programs, games, play music and more..

I think that A-Eon should consider to include and develop this piece of software inside the Software Enancher Pack..

There is a lot of things to use and discover. I hope that a lot of user will start using it from today!

Edit: if the author could add the possibility to open the workbench explorer when user clicks on the disk icon it would be perfect..
