Thanks guys for trying WEx out. I put a lot of time into.

I am making note of your ideas and issues and will work on them ASAP.

The auto window save position was there originally, but changed it to SnapShot and/or set accordingly in Prefs.

The reason the prefs file is saved so many times is to catch listbrowser column resizing, resizing of the panes (no signal from ReAction when do that), etc. It will be improved over time.

It is not multi-threaded....yet.

It is weird that myself and my 3 beta testers all say it is very fast at opening and reading drawers, but then other people say it is slow.

Scanning each file with datatypes as the drawer is scanned is both a positive and negative. It slows things down, but you get all the stats for your images/mp3s/whatever all at once.

This is the first release, bugs/issues were expected. Keep the ideas coming.
