Maybe a new entry in the "Software Support" forum would be possible?

@amigakit

AmiPDF 1.37 (20.9.2016)

Bug:

- When starting a new instance of AmiPDF the snapshotted window position that has been saved before (from within AmiPDF) IS used.

- When starting AmiPDF with a PDF file as option (i.e. "AmiPDF path/pdf-file") regardless being in a shell, using a browsers MIME setting or a shortcut in AmiDock, the window snapshot information is NOT used, instead the AmiPDF window is blown up to the max eating away massive gfx mem

Please fix it

...and no, i won't create yet another account at yet another bug tracker, thank you
