Time Prefs from the Enhancer seems to be stuck on GMT.

My time sever is ntp1.vodafone.co.nz port 123.

Everytime I boot up, it's 12 hours behind. I have "update at boot time" checked, but I have to manually open Time Prefs and click "Get time now" to get onto NZST.

Also, when I tick "Automatically adjust clock for Daylight Saving Time", it seems to be defaulting to some other country's settings (UK?), even though Locale.prefs knows my country's DST dates.
