X-Dock 0.41 (22.12.2016)

Although the Dock features an AREXX port (which first instance is always called XDOCK.1) it is not possible to open a second instance (XDOCK.2).

Actually nothing at all happens when starting X-Dock a second time.

With it's limitations right now i do need to open at least two instances of the program (better would be indefinitely, though) to be able to completely switch from AmiDock (I have a few neat tricks in AmiDock -honestly stolen from Mason's great Push4Dock package).

Though i have yet to test (when available) if two X-Docks on top of each other will behave the way i like it to be.
