For me on my x5k problem with Multiviewer start right after i installing it and trying to open first single txt. It is always reproducable for me, and, sadly to say i am the same swith to Multiview :(

As i was able to reproduce it all so easy i wrote to Andy about, to offer help with crashlogs and stuff, but, Andy says crashlogs there didn't help, as problem start to happens before actual crash happens, and its hard to track it down. I also offer help with usuall "debug printf" , but Andy probably busy with all other stuff , and think that it happens not so offten.

@Andy

As you see everyone have that problem, so , if you want and as i can reproduce it 100% all the time, i can help to track it down and give you any info you need :)
