"Though i have yet to test (when available) if two X-Docks on top of each other will behave the way i like it to be."

You can have many XDock opened by simply starting once X-Dock binary.

Simply, use RMB to "Create a new dock". It will open an empty dock and create a xml file for it.

Now each time that you start x-dock, xml files will be scanned and docks started (each with his own arexx port).
