I didn't say it but it's beta system. You are right the problem was libz.so.1.2.11. I had libz.so, libz.so.1 and libz.so.1.2 pointing to that lib and after replacing those to point to libz.so.1.2.3 SMTube works again. Thanks !

Amiga community really should rethink how to handle releasing of shared objects to avoid linking h**l in future.
