Okey, all my attempts with plain wine just ends at a requester saying "Please run the installer from the original Amiga Forever installation medium."

Doesn't matter if I:

- Mount the ISO
- Copy the ISO contents to a directory and run from there
- Burn to a DVD and run from that\*

But I'll check out "Codeweavers Cross Over" and see if that works.

\* was lucky to find a blank dvd in a box and luckily my living room computer still had a dvd writer installed. Why do people keep on using these archic things .. ohh well.
