Would you remember what key didn't work? I have now added ASL file requester for Milky.

CPU usage seems to vary between 60-80% on Sam440. I think most of it is because of drawing, playback shouldn't be that heavy. Should be profiled anyway.

If I open another module while playing the old one, CPU stays at 100% for a moment and then drops down. If I stop playing before loading then it works ok.
