Last time i succeeded installing the Uwin environment, i was able to compile for AmigaOS. I tried to compile the SDL2 and the compilation was ok. Just the SDK 53_30 was needed.

Now i reinstalled the UWin environment with the SDK 53_30, following your instructions.

Btw, when i try to compile the SDL2, as soon as compilation starts, i get an error: can't find -strict -align (sort of).

I will post the correct error message asap.

Someone told me that the the correct compiler is not executed in this case.

Any hint?
