Thank you for the replies.

I think that the configure script and make are picking the wrong compiler.

Something went wrong during the UWin environment setup. I tried all my best but, i'm sure, i get lost somewhere during the initial configuration. As pe SDL2 packages, i'm sure it works correctly (hey, capehill is doing the magic here). I already correctly configured and (almost) compiled with my previous UWin installation. Now i'm trying to reinstall everything from scratch, following the correct steps.
